

COMPANY BACKGROUND

Established in 2012, the JBM Solar team has a proven track record of securing consent for over 1GW of clean, green solar energy schemes in the UK and Ireland. JBM is focused on helping deliver the UK's net zero target of 2050, which can only be achieved with the adoption and rollout of reliable, affordable, clean energy sources. We are driven by our collective ambition to help meet the environmental challenges posed by the climate crisis. We firmly believe that our response to the climate crisis must have solar energy at its forefront and we are taking bold, innovative steps to play our part in meeting head-on these environmental challenges, and working to overcome them through our investment in clean energy.

JBM is focused on helping deliver net zero

Community Consultation

Working in partnership with local communities to unlock a project's full potential is at the heart of what we do at JBM Solar. We work with local people to shape the future of our projects and to ensure the benefits of solar energy developments are realised in a way that positively impacts local people. We take on board community voices and accommodate change where appropriate and care what local people have to say and don't take their support for granted. In order to inform residents of our proposals, consultation leaflets were sent to all properties within 2km of the site's planning boundary, alongside an ad being placed in the Redditch Standard publication in April. All parish councils representing the site, the local ward councillors and local MP were also consulted via email prior to the launch of the consultation.

JBM prides itself on working with local people to shape our developments
